Bio
Liam Hanlon is a second year student in the BArch program at California Polytechnic State University, San Luis Obispo. He serves as the AIAS liaison for the architecture students at Cal Poly, where he seeks to increase student access to information and opportunities within the profession. Through his education and experience, Mr. Hanlon has developed a deep appreciation for the power and service of architecture. He has pursued service opportunities across the globe, building classrooms and homes for those in need. His talent in design and photography enabled him to fund the material cost of his education through various projects.

Philosophy Statement
I am excited for this opportunity to collaborate and represent my fellow students. It will be important to me to continue to foster open communication as well as strengthen existing networks to provide input to the AIA. I look forward to sharing my creative mindset and brainstorming new ideas that will intrinsically increase membership value within both the AIA and AIAS as we continue to work together to maintain the integrity of the built environment. Learning to celebrate and appreciate diversity is imperative to moving forward with design across many scales. For appreciating diversity of emerging professionals is crucial to the progressive dynamics of society. Education and advocacy for conscious and communal designs is something that I believe would benefit the public.
